

Rollbar Boat arches

Una gamma di rollbar di alto livello per barche e gommoni prodotti in Italia utilizzando solo acciaio inox 316L lucidato a specchio. I nostri rollbar sono progettati per adattarsi ed esaltare l'estetica di qualunque tipo di imbarcazione (barche, gommoni, barche a vela, tenders) e sono tutti abbattibili con larghezza regolabile. I rollbar Nautinox sono facili da installare e durano per sempre.

A range of top quality boat arches manufactured in Italy from mirror-polished 316L stainless steel only. Our arches are designed to virtually fit any boat (boats, ribs, tenders and sailing boats); all the models are foldable and feature adjustable width, they are easy to install and last forever.

Rollbar model 1960

Adjustable width based on your boat: you tell us your beam (distance from mounting center to mounting center) and we'll provide you with the right central extension. This model is completely foldable: simply unscrew the knobs at the base of the rollbar and open the junction. This model is manufactured in Ø40 tube and it's available with the telescopic arch as well

To verify that you can mount this model on your boat:

- Make sure you have enough space to install the bases where you want to mount the rollbar.
- Make sure the rollbar is high enough so you don't hit your head when walking underneath.
- Make sure the base-to-base measurement does not exceed the "maximum" measurement we indicate in the tables below.

The rest is just a matter of taste!

This model is available with the telescopic bimini arch as well
